Dr. Linda Rising

Research has identified what I like to call "an agile mindset," an attitude that equates failure and problems with opportunities for learning, a belief that we can all improve over time, that our abilities are not fixed but evolve with effort. What's surprising about this research is the impact of an agile mindset on creativity and innovation, estimation, and collaboration in and out of the workplace. I'll relate what's known about this mindset and share some practical suggestions that can help all of us become even more agile.
